## SCREENING MAMMOGRAPHY

Since mammography is not 100% accurate in detecting all breast abnormalities, it is important that you obtain regular physical examination by your physician. If you have not had a regular physical examination, we urge you to do so as soon as possible.

If you are aware of any abnormalities within your breasts such as a lump, any recent skin changes or any localized area of soreness, please inform the technologist so that special pictures may be obtained if they are needed.

We at the Radiological Group accept patients for mammography by physician referral only. The report will be sent to your physician as soon as your films have been read.

I hereby represent that I have read and understand the above.
